**Check out #zilmet and post your Zilmet product installation. Here is an example of a recent post.**

**mechanicalhub** What do you know about this? .

From their site: "ZEP-1 was designed to provide maximum protection to the heat exchanger and the piping system on tankless water heaters, relieving problems associated with excess pressure by absorbing any potential increase in pressure within the unit or piping system; this helps prevent potentially costly leaks and repairs." **terramechanical** Really cool no need for a large one for this application.

**mr\_cross** I'm taking a hydronic course right now and recently learned the reasoning behind where you locate your expansion tanks and the point of no pressure change. Very interesting.
